DETAILED ACTION

Acknowledgment

1. This Office action is responsive to amendment filed on 06/24/2010.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-6, 8-11, 13-18, 20-23, 25-30, 33-37, 40 and 41 are rejected under 35 U.S.C. 102(b) as being anticipated by Zhu et al. (US 2005/0103858).

Re claims 1, 13, 25 and 41, Zhu teaches a method, a computer program product and an apparatus comprising at least one computer-readable storage medium having computer-readable program code portion stored therein, the computer-readable program code portion comprising (fig. 4I1-4I3, 26A and 26B): first executable portion for processing an input image (captured image data frame) for an attempt to decode the input image using a current barcode reading method (fig. 2A2), the processing including performing a correction of the input image (figs. 17A-19B); a second executable portion for determining whether the processing of the input image is successful ([345], [353], [504], [510] and [513]) based on a determination as to whether the correction is completed; a third executable portion for switching to one of a different barcode reading method ([0058], [0060], [0061], [0066], [0067], [0489] and [0490]) or processing a new frame of the input image using the current barcode reading method in response to the

Page 3

Application/Control Number: 11/462,152

Art Unit: 2887

processing of the input image being unsuccessful; a fourth executable portion for attempting a decode of the input image using the current barcode reading method in response to the processing of the input image being successful ([0465], [0513], [0516], [0519], [0540] and [0547]); a fifth executable portion for performing a switch to a different barcode reading method in response to a failure of the attempt to decode the input image using the current barcode reading method ([0058], [0060] [0061], [0063], [0066], [0067], [0484], [0489], [0490] and [0493]).

Re claims 2, 14 and 26, Zhu further teaches the first executable portion includes instruction for determining a region of interest (ROI) defining an area in which a barcode is expected (see fig. 17A, [0060], [0063], [0066]-[0067] and [0392]-[0395]).

Re claims 3, 15 and 27, Zhu further teaches the first executable portion includes instructions for performing the correction by correcting the ROI (see fig. 18E and [0181], [0419], [0428]).

Re claims 4, 16 and 28, Zhu further teaches the first executable portion includes instructions for correcting corner positions of the ROI based on a degree of overlap between barcode and segment of a border of the ROI which are adjacent to each respective corner (see figs. 18D-18G; [0183], [0194], [0315], [0392], [0418], [0420], [0432], [0456] and [0478]).

Re claims 5, 17 and 29, Zhu further teaches the first executable portion includes instructions for performing the correction by performing re-sampling and geometric image correction (see fig. 18E; [0419]-[0428] and [0452]).

Application/Control Number: 11/462,152

Art Unit: 2887

Page 4

Re claims 6, 11, 18, 23, 30 and 37, Zhu teaches hand-supportable digital image-based bar code symbol reader that is processing image digitally which includes a binarization element that binarizing the ROI or the input image (see [0173], [0224], [0247] [0289], [0377] and [0380]).

Re claims 8, 20 and 33, Zhu further teaches a sixth executable portion for performing a determination as to whether the input image includes one of a one dimensional (1D) barcode or a two dimensional (2D) barcode (see [0003], [0045], [0048]).

Re claims 9, 21 and 34, Zhu further teaches comprising a seventh executable portion for determining a type of barcode (see fig. 14).

Re claims 10, 22 and 36, Zhu further teaches wherein the sixth executable portion includes instructions for performing the determination based on a relationship between a first length of an object oriented in a first direction (such as X-coordinate) and second length of the object oriented in a second direction (Y-coordinate) that is substantially perpendicular to the first direction (see [0398]-[0418]).

Re claim 35, Zhu further teaches the classification is configured to determine the type of barcode based on a comparison of geometric patterns within the barcode to a known specification (see fig. 14 and [0058]-[0066]).

Re claim 40, Zhu further teaches the apparatus is embodied as a mobile terminal (see figs. 1A and 31).

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 7. Claims 7, 12, 19, 24, 31, 32, 38 and 39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zhu in view of Umeda (US 2006/0280363).

Page 6

Application/Control Number: 11/462,152

Art Unit: 2887

Re claims 7, 12, 19, 24, 31 and 38, Zhu teaches hand-supportable digital imagebased bar code symbol reader that processing image digitally (global binarization, [02446]-[0248]) and automatically switching to one of a different barcode reading functions in response to input image being unsuccessful.

However, Zhu fails to teach switching to adaptive binarization.

Umeda teaches image processing apparatus using adaptive binarization (see [0223] and [0224]).

In view of Umeda's teachings, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the system and method of Zhu by employing adaptive binarization function as taught by Umeda so that the image can be decoded successfully and such modification would provide better reading/decoding.

Re claims 32 and 39, both Zhu and Umeda teach all subject matter claimed as applied above. Umeda further teaches wherein adaptive binarization comprises dividing the input image into regions and separately binarizing the regions of the input image based on a relationship between a moving sum of region values compared to an adaptive threshold (see figs. 25, 28A, 28B, [0079], [0083], [0200], [0201], [0209] and [0023]-[0224]).

Response to Arguments

8. Applicant's arguments filed 06/24/2010 have been fully considered but they are not persuasive.

Page 7

Application/Control Number: 11/462,152

Art Unit: 2887

Applicant traversed to the rejection by mainly arguing that the Zhu reference fails to teach "the processing includes performing a correction on the input image and that determining whether the processing of the input image is successful is based on a determination as to whether the correction is completed." Examiner is respectfully not agreed.

In paragraphs [0175], [0183], [0188], [0194] and figure 17A of Zhu discloses the processing of image involve searching for regions of interest, partitioning image and marking the four corners of ROI, etc. Although Zhu does not explicitly teach the exact term of "correct on the input image", however by performing such processing steps would inherently includes correcting of the image for analyzing before decoding the image.

With regarding to claims 4, 16 and 28, same rationale as applied above.

Based on the above rationale, it is believed that the rejection to claims 1-41 are proper and therefor, the rejections are still maintained.

Conclusion

Examiner's note: Examiner has cited particular columns and line numbers in the references as applied to the claims above for the convenience of the applicant. Although the specified citations are representative of the teachings of the art and are applied to the specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested from the applicant in preparing responses, to fully consider the references in entirety as potentially teaching all or part

Application/Control Number: 11/462,152

Art Unit: 2887

of the claimed invention, as well as the context of the passage as taught by the prior art

or disclosed by the Examiner.

9. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time

policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later

than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Tuyen Kim Vo whose telephone number is (571)270-

1657. The examiner can normally be reached on Monday - Friday, 7:30a.m. - 5:00p.m.,

EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Steven S. Paik can be reached on (571) 272-2404. The fax phone number

for the organization where this application or proceeding is assigned is 571-273-8300.
